# Goals

- By the end of this part, you should be able to
  - Describe the goal this course
  - Summarize what you will learn
  - Understand the course evaluation
  - Know the pre-requisite for the course and prepare yourself for the exciting times ahead

# Course Goals

- **Explain** a few methods for Regression and Classification.
- **Implement** and **apply** these methods to real data.
- **Discuss** fundamental principles of machine learning.
- **Create** an assessment of current skill level, and **devise** a plan for ongoing learning.

# (A rough) Outline of the Course

- Week 1 (online): Intro + regression (linear models)
- Week 2 (online): (Stochastic) gradient descent, Newton's method,
- Week 3 (online): Overfitting, cross-validation, bias-variance decomposition
  - Project starts
- Week 4 (online): Classification: Logistic regression
- Week 5 (online): Classification: Support vector machines
- **BREAK FOR PROJECTS**
- Week 10 (online): Deep Learning methods
- Week 11 (online/in-person): Gaussian Process Regression and Classification
- Week 12 (in-person): Machine Learning from a Bayesian Perspective
- Week 13 (in-person): Machine Learning from a Bayesian Perspective,
  - Project ends
- Week 14 (in-person): Recap and project presentations

# Course Schedule

## MAY 2022

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
1	2	3	4	5	6	7
8	9	10	11	12	13	14
Lecture starts	15	16	17	18	19	20
22	23	24	25	26	27	28
29	30	31				

## JUNE 2022

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
			1	2	3	4
5	6	7	8	9	10	11
Project starts	12	13	14	15	16	17
19	20	21	22	23	24	25
26	27	28	29	30		

## JULY 2022

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
31					1	2
3	4	5	6	7	8	9
10	11	12	13	14	15	16
17	18	19	20	21	22	23
24	25	26	27	28	29	30

## AUGUST 2022

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30	31			

- 10 week lectures
  - Tu, Wed (1-3pm), 1h30m, with many discussions/breaks
  - Summary due every 2 weeks of lecture on Fridays.
- 10 week project
  - Starts in week 4 (June 6)
  - Ends on week 13 (Aug12)
  - Presentation on Aug. 16-17

# Course Evaluation

- [40%] Class summary
  - Students will summarize every two weeks of lecture in their own words (a total of 5 such reports). This needs to be a summary based on understanding and can be as short as 2 pages.
- [40%] Project report and presentation:
  - 10 week project
  - Define a good project (should involve applying ML methods on a real-world problem/data, and report the findings)
  - students will submit a final project report in Week 13, and present their work in Week 14.
  - The grading will be based on constructive feedback from the class on the project and presentation.
- [20%] Class participation
  - Participate in in-class quizzes and discussions
- Due dates are always on Fridays at noon JST.

# The Teaching Team

- We will hold office hours on request
- Please ask the day before earlier than 5pm JST. Then we will then announce the session in slack.
  - Emti: 5-5:30pm on May 17, 31, June 14, 28, July 12, 26, Aug. 9
  - Tom: 12-1:30pm on May 23, June 6, 20
  - David: Office hours in June and July, when requested

# Resources

- Course Webpage
  - [https://emtiyaz.github.io/teaching/oist\\_B39\\_2022/main.html](https://emtiyaz.github.io/teaching/oist_B39_2022/main.html)
  - Join the course Slack (if you haven't joined yet, send us a request by email and we will send an invite link).
- Lecture notes
  - During the lectures, I will use lecture notes (with blank space for you to take note if you want).
  - These will be available on the course webpage beforehand.
  - You can either print them or use a tablet to annotate
  - An **annotated copy (with my annotations from the class) will be available after the lecture.**

# Books (for reference only)

- T. Hastie, R. Tibshirani and J. Friedman: Elements of statistical learning
  - <http://statweb.stanford.edu/~tibs/ElemStatLearn/>
- C. Bishop: Pattern Recognition and Machine Learning
  - <https://www.microsoft.com/en-us/research/publication/pattern-recognition-machine-learning/>
- K. Murphy: Machine Learning: A Probabilistic Perspective
  - <https://probml.github.io/pml-book/book1.html>

# What not to expect!

- You will not learn ALL advanced methods.
- You will not learn ALL the details.
- This course is not about big data or largescale methods.
- This is not a course about numerical optimization, neither is it about statistics. We will use both of these and learn basic techniques only.
- We will not teach the pre-requisite for ML. You have to learn that on your own, but we are happy to hold office hours to help you through them
- This course does not teach you all that you need to know to be able to apply machine learning, but this course will get you started for sure

# Prerequisite (must know)

- Matrix calculus.
  - How to take derivative with respect to vectors and matrices.
    - <https://atmos.washington.edu/~dennis/MatrixCalculus.pdf>
    - [https://en.wikipedia.org/wiki/Matrix\\_calculus](https://en.wikipedia.org/wiki/Matrix_calculus)
  - You can learn more about it from wikipedia or Matrix Cookbook
    - [http://www.imm.dtu.dk/pubdb/views/edoc\\_download.php/3274/pdf/imm3274.pdf](http://www.imm.dtu.dk/pubdb/views/edoc_download.php/3274/pdf/imm3274.pdf)
- Basic Probability
  - Normal distribution
  - Read Chapter 2 in Bishop's book on Machine Learning

# Prerequisite (must know)

- Matrix algebra.
  - Basics: Vector and matrix multiplication, ([https://en.wikipedia.org/wiki/Matrix\\_multiplication](https://en.wikipedia.org/wiki/Matrix_multiplication))
  - More advance topics (see Wikipedia): Matrix inversion and determinants, rank, null and range space, eigenvalue decomposition.
  - There is also a handout posted on the course webpage.

# Goals

- By the end of this part, you should be able to
  - Describe the goal this course
  - Summarize what you will learn
  - Understand the course evaluation
  - Know the pre-requisite for the course and prepare yourself for the difficult times ahead
