# My Research

*“To understand the **fundamental principles of learning** from data and use them to **develop algorithms** that can learn like living beings.”*

Bridging the gap between  
“algorithms” and “living-beings”.

# Goal of “Intro to ML”

- By the end of this part, you should be able to
  - Define ML and discuss some of its goals
  - Learn a few success cases of ML application
  - Learn a few examples where ML fails

# Machine learning

Making a computer **intelligent**  
without **explicitly** programming it

## Microsoft's John Platt Talks About Artificial Intelligence

AI is “software trying to emulate human minds”

ML is to “create that software from data”

60's Computer Revolution

**AI brought a lot of hope**

**If-then-else == Intelligence**

If-then-else << **Intelligence**

# “Learn” to generate “intelligent” software

Making a computer **intelligent**  
without **explicitly** programming it

# **Inspired by the learning process of living beings**

From humans... to crows...  
to rats... to cockroaches

6 months old,  
learning about  
ukulele

At the age of  
12 months,  
finished learning.

At 14 months,  
learning  
about guitars.

# Learning from **experience**

**Learning from ~~experience~~ data**

# Success Stories

# Inside Google's Secret Drone-Delivery Program

For two years, the company has been working to build flying robots that can deliver products across a city in a minute or two. *An Atlantic* exclusive.

# AlphaGo: using machine learning to master the ancient game of Go

January 27, 2016

# Challenges

**Existing methods require a large amount of 'good-quality' data**

# Data is 'nasty'!

Unreliable, noisy, missing, too small,  
high-dimensional, redundant etc.

# Failure Stories

# Example 1 : Popularity Bias

## The Harry Potter Problem
